

1. ExpTest - ExpNotHand()

```
1 namespace CSharp;
2 class ExpTest
3 {
4     public static void ExpNotHand()
5     {
6         int x, y;
7         Console.WriteLine("Enter X:");
8         x = int.Parse(Console.ReadLine());
9         Console.WriteLine("Enter Y:");
10        y = int.Parse(Console.ReadLine());
11        Console.WriteLine(x / y);
12        Console.WriteLine("End");
13    }
14 }
15 }
16 }
```

2. ExpTest - ExpHand()

```
1 namespace CSharp;
2 class ExpTest
3 {
4     public static void ExpHand()
5     {
6         int x, y;
7         try
8         {
9             Console.WriteLine("Enter X:");
10            x = int.Parse(Console.ReadLine());
11            Console.WriteLine("Enter Y:");
12            y = int.Parse(Console.ReadLine());
13            Console.WriteLine(x / y);
14        }
15        catch (DivideByZeroException ex)
16        {
17            Console.WriteLine(ex.Message);
18        }
19        catch (FormatException ex)
20        {
21            Console.WriteLine(ex.Message);
22        }
23        Console.WriteLine("End");
24    }
25 }
```

3. ExpTest - ExpHandSuper()

```
1 namespace CSharp;
2 class ExpTest
3 {
4     public static void ExpHandSuper()
5     {
6         int x, y;
7         try
8         {
9             Console.WriteLine("Enter X:");
10            x = int.Parse(Console.ReadLine());
11            Console.WriteLine("Enter Y:");
12            y = int.Parse(Console.ReadLine());
13            Console.WriteLine(x / y);
14        }
15        catch (Exception ex)
16        {
17            Console.WriteLine(ex.Message);
18        }
19        Console.WriteLine("End");
20    }
21 }
```

4. ExpTest - ExpHandMulti()

```
1 namespace CSharp;
2 class ExpTest
3 {
4     public static void ExpHandMulti()
5     {
6         int x, y;
7         try
8         {
9             try
10            {
11                Console.WriteLine("Enter X:");
12                x = int.Parse(Console.ReadLine());
13                Console.WriteLine("Enter Y:");
14                y = int.Parse(Console.ReadLine());
15                Console.WriteLine(x / y);
16            }
17            catch (DivideByZeroException ex)
18            {
19                Console.WriteLine(ex.Message + " First");
20            }
21            Console.WriteLine(" First End ");
22        }
23        catch (FormatException ex)
24        {
25            Console.WriteLine(ex.Message + " Second");
26        }
27        catch (Exception ex)
28        {
29        }
30    }
31 }
```

```
28 {
29     Console.WriteLine(ex.Message);
30 }
31 }
32 Console.WriteLine("End");
33 Console.ReadKey();
34 }
```

5. ExpTest - ExpHandFinally()

```
1 namespace CSharp;
2 class ExpTest
3 {
4     public static void ExpHandFinally()
5     {
6         int x, y;
7         try
8         {
9             Console.WriteLine("Enter X:");
10            x = int.Parse(Console.ReadLine());
11            Console.WriteLine("Enter Y:");
12            y = int.Parse(Console.ReadLine());
13            Console.WriteLine(x / y);
14        }
15        catch (DivideByZeroException ex)
16        {
17            Console.WriteLine(ex.Message);
18        }
19        finally
20        {
21            Console.WriteLine("Finally");
22        }
23        Console.WriteLine("End");
24    }
25 }
```
