

Class Requirements:

- **Constructor:** Initialize the student's name, age, and grade.
- **Properties:**
 - **Name:** The student's name.
 - **Age:** The student's age.
 - **Grade:** The student's grade (A, B, or C). If an invalid grade is entered, throw an exception.
- **Static Field:** A static field `totalStudents` should keep track of the number of students created. This should increment whenever a new student is created.
- **Method to Display Information:** Create a method that displays the student's information, including the static total count of students.

Example Input and Output:

Input:

Student 1: Name = John, Age = 18, Grade = A
Student 2: Name = Jane, Age = 19, Grade = B
Student 3: Name = Tom, Age = 20, Grade = D

Output:

Name: John, Age: 18, Grade: A
Total Students: 1

Name: Jane, Age: 19, Grade: B
Total Students: 2

Name: Tom, Age: 20, Grade:
Total Students: 3
