

Partitioned Table Questions

Range Partitioning Questions

1. Create a partitioned table where employees are divided based on salary ranges (e.g., <50,000, 50,000-100,000, >100,000).
 2. Write a query to retrieve employees earning between 50,000 and 100,000 from a range-partitioned table.
 3. Retrieve the count of employees in each salary range partition.
 4. Write a query to check which partition a specific employee record belongs to.
-

List Partitioning Questions

11. Create a partitioned table where employees are grouped by department.
 12. Write a query to retrieve all employees from the 'HR' department partition.
 13. Write a query to count employees in each department from a list-partitioned table.
 14. Retrieve all partitions where no employees exist.
